Calling a second person during a conversation

During a conversation, to call a second person.

Dial directly the number for your call (not available in "safe" mode).

Sending DTMF signals

During a conversation you sometimes have to send DTMF signals, such as with a voice server, an automated attendant or a remotely consulted answering machine. The function is automatically cancelled when you hang up.

Example:

- To send the DTMF signal for your call:
  - Press the key next to "cancel or deactivate the diversion".

During a conversation

By default, your telephone in "safe" mode is configured to send codes in voice frequency.

If you prefer to send codes sent by voice frequency, do the following:

- Press the key associated with the type of diversion required (immediate if busy, if no reply etc.).
- Follow the instructions displayed on the screen.

Three-way conference

During a conversation, a second call is on hold.

Transfer the call to another number

Make a call-back request to a busy number

To make an external call, dial the outside line access code before dialing your correspondent’s number.

Dial by URI
